

SOCIAL EPIDEMIOLOGY COURSE 2018/2019
STUDENTS EVALUATION (based on 14 of 14 students)

Most useful aspects of the course

Overall very interesting the new methods learnt: RII, decomposition,
 Relevant theories, particularly intersectionality, social determinants
 Measures of inequalities
 The concept of social determinants of health inequalities
 Articles, book, assignment
 Learning new methods and apply them to the course project

Aspects you would have liked to change

More paper discussions with articles that combine theory and methods (like the life course)
 More sessions to interpret stata results
 Gender theory came a bit repetitive
 Difficult to apply theories in practice
 More discussions on the application of theoretical frameworks to health inequalities
 More time on interpretation of the decomposition analysis

Other comments/recommendations

The course could be offer to health economics
 Combine the lectures of gender and youth

Proportion of students grading the evaluation questions
