| <b>Course name: PMHC</b>                 |
| <b>Semester: Spring 2021</b>             |
| <b>Number of registered students: 23</b> |

### 1. Which aspects of the course went well?

A variety of activities; practical sessions and assignments, with fun and effective learning, and group discussions, with opportunities to learn from each other as well as the quality and number of the intervenants, e.g. lectures from people working in the field, sharing their experiences and perspectives. Lectures with practical experience was really helpful, keep it like that and increase one more session.

Inspired teachers and the encouraging attitude of the teachers to share thoughts and learn from each other during lectures and in group work.

“Despite Zoom, I felt like I was belonging to a classroom and that is very nice”

New authors, clear ppt documents from class and the introduction of different models was appreciated.

### 2. Which aspects of the course need improvement?

Even more work with other students' cases, for better analyses.

Some literature was a bit challenging.

More about formal organization of healthcare systems.

Introduce more actors of various multidisciplinary sectors. And choose guests with care.

### 3. Suggested changes for the coming semester (if any)

Use of more resources, such as links to good, recorded webinars, TED talks, online talks, videos, movies, podcasts etc.
