

**Course name: Evidence based public health**

**Semester: autumn -20**

**Number of registered students: 25**

**1. Which aspects of the course went well?**

Lectures, seminars and group discussions went well. We had good discussions about different types of evidence. The current pandemic and vaccination raised many opportunities for discussions. The examination was a home-exam and participation in seminars went ok.

**2. Which aspects of the course need improvement?**

Some students didn't fully reach the goal of being able to identify and assess different types of evidence and their value in public health.

### **3. Suggested changes for the coming semester (if any)**

There are a lot of new research being published with particular relevance for this the course, e.g. evidence-based governance, barriers to implementation of public health policys etc. We aim to include some of these in next years course.

In the teachers group we have developed our competence in the field of systematic literature review and meta-analysis by taking courses from SBU. This will be incorporated in the course coming year.

**Lecturer: Linda Richter Sundberg**

**Date: 20-12-04**
