

SOCIAL EPIDEMIOLOGY COURSE 2019/2020
STUDENTS EVALUATION (based on 9 of 9 students)

Most useful aspects of the course

Overall very interesting the new methods learnt: RII, decomposition, ...
 Friendly environment, interactive
 Good introduction to the field
 Good reading material
 Good with group discussions, presentations
 Good coordination and course content
 Good methodological assignment
 Home exam presentations were very relevant

Aspects you would have liked to change

Allocate time in the afternoons with a tutor to discuss the exercises
 Difficult to connect theory and methods
 Not advance course; theories and methods still unclear. Lectures more on facts and previous research than about theories and methods

Other comments/recommendations

Watch that different timetables agree
 Some lectures were long, better to break them with some group discussions.
 Include principal component analysis
 Try to fit all lectures before Christmas break

Proportion of students grading the evaluation questions
