

Advanced Statistical Inference

Credits: 15 ECTS

Course organiser and lecturer

Department of Mathematics and Mathematical Statistics

Jun Yu, e-mail: jun.yu@umu.se

Course period: February – May 2022

Prerequisites

Courses in probability theory and inference theory at second-cycle level, corresponding to 5MS073 and 5MS058. The PhD course in Probability Theory (7.5 credits)

Objective

The goal of the course is in a mathematically rigorous fashion to provide essential materials in statistical theory that a first- or second-year graduate student typically needs to learn as preparation for work on a PhD degree in mathematical statistics.

There will be one three-hour lecture per week and one three-hour exercise presentation and discussion per week.

Content

This course covers topics in statistical theory essential for graduate students. The course introduces some fundamental concepts in statistical decision theory and inference and contains detailed studies on some crucial topics: unbiased estimation, parametric estimation, and nonparametric estimation. In addition to the classical results, some topics in modern statistical theory are also introduced; including Markov chain Monte Carlo, quasi-likelihoods, empirical likelihoods, semiparametric models, statistical functionals, generalised estimation equations, the jackknife, and the bootstrap, together with a large number of exercises which includes many additional results.

Examination

The examination consists of an oral exam and a written exam at the end of the course.

Literature

The primary course literature is Jun Shao's book (recommended buying). The other books are complementary reading. They are excellent reference literature.

Shao, J. *Mathematical Statistics*, 2nd Edition. Springer, 2003.

Shao, J. *Mathematical Statistics: Exercises and Solutions*. Springer, 2005.

Lehmann, E.L. & Casella, G. *Theory of Point Estimation*, 2nd Edition. Springer, 1998.

Lehmann, E.L. & Romano, J.P. *Testing Statistical Hypothesis*, 3rd Edition. Springer, 2008.

Efron, B. & Hastie, T. *Computer Age Statistical Inference*, Cambridge University Press, 2016.
